## AMENDMENTS TO THE CLAIMS

- 1.-4. (Canceled)
- 5. (Currently Amended) A method for enhancing an immune response in a subject, comprising
- <u>a)</u> contacting a population of cells comprising one or more of a mature B cell and a B cell progenitor with a composition comprising IL-21 or an agonist thereof, thereby inducing differentiation of at least one of the mature B cell and the B cell progenitor into one or more of a memory B cell and a plasma cell;
  - b) isolating or purifying one or more of the memory B cell and the plasma cell; and
- <u>c)</u> introducing at least one of the memory B cell and the plasma cell into the subject, thereby enhancing the immune response.
- 6. (Currently Amended) The method of claim 5, comprising contacting the population of cells with the composition comprising IL-21 or an agonist thereof by administering the composition comprising IL-21 or an agonist thereof directly to a subject.
- 7. (Currently Amended) The method of claim 5, comprising contacting the population of cells with the composition comprising IL-21 or an agonist thereof ex vivo.
  - 8. (Original) The method of claim 5, wherein the subject is a human subject.
- 9. (Currently Amended) A The method for enhancing an immune response in a subject of claim 5, comprising: (a) isolating a the population of cells comprising one or more of a mature B cell and a B cell progenitor from a subject before contacting the population of cells with a composition comprising IL-21 or an agonist thereof; (b) contacting the population of cells ex vivo with a composition comprising IL-21 or an agonist thereof, thereby inducing differentiation of at least one of the mature B cell and the B cell progenitor into one or more of a memory B cell and a plasma cell; (c) isolating the memory B cell, the plasma cell, or both; and (d) introducing at least one of the memory B cell and the plasma cell into a subject.

- 10. (Original) The method of claim 9, further comprising contacting the population of cells with at least one composition comprising an antigen.
- 11. (Original) The method of claim 10, wherein the antigen comprises a viral antigen, a bacterial antigen, or an antigen from a parasite.
- 12. (Original) The method of claim 9, wherein the B cell progenitor is an immature B cell.
- 13. (Original) A method for treating a subject with a condition comprising a specific deficiency of at least one of memory B cells and plasma cells, comprising administering to the subject with the deficiency of at least one of memory B cells and plasma cells a therapeutically effective amount of IL-21 or an agonist thereof, thereby ameliorating a sign or symptom of the deficiency.
- 14. (Original) The method of claim 13, wherein the condition comprises an immunodeficiency.
- 15. (Original) The method of claim 13, the deficiency comprising a reduction in number or function of at least one of the memory B cells and plasma cells.
- 16. (Original) The method of claim 15, wherein the deficiency is a post-bone marrow transplantation deficiency.
- 17. (Original) The method of claim 13, comprising administering an amount of IL-21 or an agonist thereof sufficient to increase the number or proportion of at least one of memory B cells or plasma cells.
- 18. (Original) The method of claim 13, comprising administering the IL-21 or agonist thereof by
- a) treating a population of cells comprising at least one of a mature B cell and a B cell progenitor ex vivo, thereby inducing differentiation of at least one B cell into one or more of a memory B cell and a plasma cell;
  - b) isolating the memory B cell, the plasma cell, or both; and

- c) introducing at least one of the memory B cell and the plasma cell into the subject.
- 19. (Original) The method of claim 18, wherein the population of cells comprises one or more of a heterologous mature B cell or a heterologous B cell progenitor.
  - 20. (Original) The method of claim 13, wherein the subject is a human subject.
- 21. (Original) A method for identifying an agent with a physiological effect on differentiation of one or more of a memory B cell and a plasma cell, the method comprising:
- a) contacting an isolated population of cells exposed to a composition comprising IL-21 with at least one agent, wherein the population of cells comprises at least one B cell progenitor; and
- b) detecting at least one physiological effect of the agent on memory B cell differentiation, plasma cell differentiation, or both.
- 22. (Original) The method of claim 21, wherein the physiological effect is inhibition of differentiation of one or more of the memory B cell and the plasma cell from the B cell progenitor.
- 23. (Original) The method of claim 21, comprising contacting each of a plurality of subsets of the population of cells with a different agent, each of which agents is a member of a library of compositions.
- 24. (Original) The method of claim 21, wherein the B cell progenitor is an immature B cell.
- 25. (Original) A method of identifying an agent that inhibits an activity of IL-21, comprising

contacting a cell with at least one agent; and

detecting a decrease in the production or activity of at least one of Blimp-1 and Bcl-6 relative to a control cell;

thereby identifying an agent that inhibits an activity IL-21.

7

- 26. (Original) The method of claim 25, wherein the agent decreases the production or activity of Blimp-1 or Bcl-6.
  - 27. (Original) The method of claim 25, wherein the cell is contacted with IL-21.
- 28. (Original) The method of claim 25, wherein the agent is an antibody that specifically binds Blimp-1 or Bcl-6.
- 29. (Original) The method of claim 25, wherein the control is a cell not contacted with the agent.
- 30. (Original) A method for inducing differentiation of a B cell progenitor into at least one of a memory B cell and a plasma cell, the method comprising:

contacting a population of cells comprising a B cell progenitor with an agent that activates at least one of JAK1, JAK3, STAT5A or STAT5B; and

isolating one or more of a memory B cell and a plasma cell;

thereby inducing differentiation of at least one mature B cell into one or more of a memory B cell and a plasma cell.

31. (Original) The method of claim 30, wherein the agent is IL-21.
